

Vijay Singh

📍 Berlin, Germany ✉️ vj2010sn@gmail.com 🌐 vijaysingh-75b335b4 🐙 DARTH-koder007

Summary

Senior frontend engineer specializing in design systems and developer tooling, with a growing focus on applying LLMs to code analysis and developer workflows. Built static-analysis tooling (a TypeScript parser) to track design-system adoption at scale; now building agentic, LLM-powered extensions of that tooling.

Experience

Delivery Hero, Senior Software Engineer

Berlin, Germany
Oct 2024 – present
2 years 1 month

- Own Cape, Delivery Hero's design system (component library and design tokens shipped as an NPM package, adopted org-wide).
- Led Cape Crawler, automated design-system adoption tracking across frontend repos via static analysis.
- Built Cape Fly, an agentic Slack bot using retrieval-augmented generation (RAG) and tool-calling (Gemini / Google Vertex AI) to answer design-system questions with cited sources, confidence scoring, and a cost-aware opt-in ambient mode.
- Built a canonical design-system manifest powering an MCP design-to-code pipeline and the Figma-to-production design-token pipeline (Figma Variables to GitHub to token package to component package); grounds AI-generated UI in real component contracts.
- Extended the design system into Help Center, a B2C product, including a performance-engineering workstream on critical-rendering-path and cold-start optimization.

Delivery Hero, Software Engineer 2

Berlin, Germany
Oct 2021 – Sept 2024
3 years

- Built reusable, scalable UI components for Delivery Hero's back-office design system and drove onboarding of product teams onto it.
- Created a metrics dashboard and API tracking UI-component usage across frontend repos, using static code analysis and a TypeScript parser; also revamped the design system's foundational design tokens.
- Automated the release and publish process for private NPM packages in a mono-repo setup using GitHub Actions.

InMobi, SDE II / SDE I

Bangalore, India
Jan 2019 – Oct 2021
2 years 10 months

- Built the UI for the Customer Data Platform, contributing to component design, UX discussions, and project architecture.
- Led the UI team for the Audience Intelligence Platform, mentoring team members through delivery with unit and integration testing.
- Took part in bootstrapping InMobi's design system and built reusable components and dynamically generated component docs.

Paytm, Software Engineer

Noida, India
May 2018 – Jan 2019
9 months

- Built SalaryAccounts Management and Web Remittance, corporate net-banking and money-transfer web applications.

Wadi.com, Software Development Engineer

Gurgaon, India
Jan 2016 – May 2018
2 years 5 months

- Lead contributor on Wadi Grocery's mobile web app and a new checkout platform (one-click checkout, social login, OTP auth) for grocery delivery across KSA and UAE.

Education

BTech Dr. A.P.J. Abdul Kalam Technical University, Computer Science

Jan 2012 – Jan 2016

Skills

Frontend: React, TypeScript, JavaScript, Node.js

Design Systems: Component libraries, design tokens, Figma API, adoption tooling

AI / Agentic Tooling: LLMs, RAG, MCP, tool-calling, Google Vertex AI (Gemini)

Infrastructure: GitHub Actions, CI/CD, static analysis, mono-repos
