Vijay Singh

Senior Software Engineer | Design Systems, Developer Platforms & Applied AI | TypeScript, React, Node.js

Berlin, Germany vj2010sn@gmail.com vijaysingh.dev vijaysingh-75b335b4 Darth-koder007

Summary

Senior engineer who owns the engineering side of a design system, from token architecture and component APIs to versioning, migration codemods, visual regression testing and adoption analytics. Built Cape for Delivery Hero and added AI tooling on top of it: a RAG Slack bot and an MCP design-to-code pipeline. Also led a Node/BigQuery/Kubernetes KPI dashboard for executive leadership.

Experience

Delivery Hero, Senior Software Engineer — Berlin, Germany
July 2024 – present
2 years 4 months

- Designed and built Cape Fly solo, an agentic RAG Slack bot (Gemini on Vertex AI), used by about half of the design-system community; replies went from ~1 day to under 10 seconds. Ambient mode calls the LLM only after a private opt-in.
- Created Cape Crawler (TypeScript static analysis), which audits design-system adoption across the company's React repositories and identifies migration targets.
- Led pre-release hardening for Cape v1.0 and wrote the 0.11 to 1.0 migration codemod; 5+ product-team plugins adopted in Q2.
- Authored the RFC and built multi-theme visual regression testing in CI across 20+ themes, replacing manual theme validation.
- Authored and executed the deprecation of the legacy design system (references updated, repos archived, consumers guided).
- Designed a canonical Cape manifest and custom MCP server that, with Figma's MCP, ground Claude's UI generation in real component and token contracts.
- Brought Cape into Help Center, a B2C product: B2C themes, WCAG 2.1 AA accessibility work, co-owned the codebase with the product teams.
- Lead engineer on the KPI dashboard for executive engineering leadership (React, Node.js (Hono), BigQuery, Redis, Kubernetes); took over frontend delivery when the project was at risk, escalated API needs early, shipped on the predicted date; led 2 engineers.
- Built the internal developer portal frontend from scratch (architecture, CI/CD, sanity tests); shipped chat, application and deployment pages in under a month alongside 3+ backend engineers.

Delivery Hero, Software Engineer II — Berlin, Germany
Oct 2021 – June 2024
2 years 9 months

- Re-architected the design-token structure with the design lead: shipped themes grew 5 to 14 (later 18 incl. B2C) and token bundle size fell 15%; tokens ship as CSS and JS variables across 9 brands in light/dark modes.
- Built Cape's first component and wrote its engineering guidelines; designed the overlay foundation (Dialog, Drawer, Tooltip) and built Grid and Button; added RTL support; authored the Table ADR.
- Set up Cape's CI/CD with Docker-based visual regression testing, semantic versioning with changesets, automated releases, per-PR Storybook previews, Codacy analysis (coverage 90%+), token bundle-size check.
- Automated component API docs (-0.5 days per component); cut dev-environment setup from 10+ to ~4 min and Storybook refresh from 30 s to <10 ms.
- Mentored 7+ contributors; interviewed 5+ graduate candidates.

InMobi, SDE II / SDE I — Bangalore, India
Jan 2019 – Oct 2021
2 years 10 months

- Built the UI for the Customer Data Platform, contributing to component design, UX discussions, and project architecture.
- Led the UI team for the Audience Intelligence Platform, mentoring team members through delivery with unit and integration testing.
- Took part in bootstrapping InMobi's design system and built reusable components and dynamically generated component docs.

Paytm, Software Engineer — Noida, India
May 2018 – Jan 2019
9 months

- Built SalaryAccounts Management and Web Remittance, corporate net-banking and money-transfer web applications.

Wadi.com, Software Development Engineer — Gurgaon, India
Jan 2016 – May 2018
2 years 5 months

- Lead contributor on Wadi Grocery's mobile web app and a new checkout platform (one-click checkout, social login, OTP auth) for grocery delivery across KSA and UAE.

Education

BTech **Dr. A.P.J. Abdul Kalam Technical University**, Computer Science — Jan 2012 – Jan 2016

Skills

Design systems: component APIs, design tokens (Figma Variables, Tokens Studio), Storybook, visual regression testing, semantic versioning (changesets), codemods, WCAG 2.1 AA

Frontend: React, TypeScript, JavaScript, Vite, Rollup, pnpm, Turborepo

Backend & infra: Node.js, Hono, BigQuery, Redis, Docker, Kubernetes, GitHub Actions, CI/CD

AI tooling: RAG, tool calling, MCP, Google Vertex AI (Gemini), Claude
